## Cleaning surfaces at home to help stop the spread of COVID-19

COVID-19 can survive on surfaces for a few hours or up to several days. It can be killed through simple cleaning and disinfection. While cleaning is important, the risk of transmission from a contaminated surface is much lower compared to having close contact with a COVID-19 case.

## How to clean

Frequently touched surfaces		Less touched surfaces
<ul> <li>doorknobs</li> <li>handles</li> <li>light switches</li> <li>phones</li> <li>tablets</li> <li>touch screens</li> <li>tables</li> <li>hard-backed chairs</li> </ul>	<ul> <li>remote controls</li> <li>keyboards</li> <li>desks</li> <li>toilets</li> <li>sinks/basins</li> <li>car steering wheel</li> <li>car seats</li> </ul>	<ul><li>floors</li><li>walls</li><li>ceilings</li><li>window blinds</li><li>curtains</li></ul>
Regularly clean with a household detergent followed by disinfectant, or use detergent/disinfectant wipes (scrub hard).		Clean using a household detergent or detergent wipes.  Use a damp mop on hard floors. Clean walls and window blinds when visibly dusty or soiled. Curtains should be changed regularly and cleaned when soiled.

## Detergent or disinfectant?

Some detergents help remove germs, dirt, and impurities from surfaces but they do not kill germs.

Disinfectants kill viruses and bacteria but don't remove them from a surface unless used with detergent and scrubbing.

Using a detergent then a disinfectant helps lower the risk of spreading infection.

## Remember

- Wash your hands as soon as you get home, after putting groceries or other items away and before you eat
- Clean regularly used items such as your phone and keys
